

EXPLANATION OF VARIANCES

During the implementation period, several activities evolved in response to community needs and emerging advocacy opportunities.

The main variance compared to the original proposal relates to:

- Increased investment in direct patient education through workshops and diabetes camps
- Expansion of advocacy activities toward national institutions
- Strengthening digital education and information accessibility via web content development

Some originally planned expenses were optimized through partnerships, volunteer engagement, and institutional cooperation, allowing the organization to reallocate resources toward higher patient impact activities without exceeding the total grant amount.
